Personal Statement

I am a postgraduate. I am positive and proactive with a strong interest in UX design and skill in programming in C++, C# and UE5 blueprints, I enjoy fixing problems and making unused features more relevant. I am hard working and reliable and willing to learn.

Internship (2024, Unreal Engine 5)

I worked at World Makers on Deceit 2 looking at the game's balance along adding new roles and ways to keep players interested while keeping it easy enough for new players to learn using the UI to make things clear to the players. I'm still in contact with them as I am often brought in to do playtesting for various things.

Final Major Project (2025 Unreal Engine 5)

I took on as group leader and handed out roles among my team (6 members) which went very well as we worked collaboratively allowing the game to win best game at an event where we presented it to audiences.

I'm interested in having a voice in the games industry and creating something for people to enjoy, with a preference to working in indie games companies.

Industry Experience

Worked in Unreal 4,5 and Unity

Internship at World Makers as Programmer/Designer (2024)

Level 6 group project won best game at GameX (2025)

Presenter for my team at GameX (2025)

Level 4 group project was shown off at ComX (2022)

Industry Employment

World Makers Programming Internship March-May 2024

Segritude Games March 2026-Present

Firefly Studios QA Work Experience June 2026

Skills

Good at communicating in group projects either as leader or as junior.

Happy to playtest and find issues in many games then help fix them.

I feel confident to come up with ideas for the games I play which makes me feel confident to do so and work on them for the games I develop.

Interests

I enjoy gaming in my free time, not just as a job. I have fun doing content creation on the games I play either helping to teach people about a game or talking about ways to help improve the game to get community feedback on ideas to help them be

heard. Outside of gaming I enjoy going Paintball/Airsoft and Go-Karting with some friends.

Education

Gloucestershire University - September 2021- June 2025

Games Programming Level 4,5,6 with placement - Grading a 2:1

SGS College - - September 2019-June 2021

Games Design - Level 3 & Extended Level 3
